SupportSuite
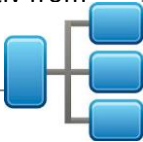

Monitor Process Exceptions

Filter Appian Process Exceptions by application and process model. Launch Process Monitor directly from SupportSuite

Appian Instance Dashboard

Monitor Appian Engine status (for all engines), Disk availability percentage, Engine warnings, all in one dashboard!

Monitoring Checklist

Appian recommended monitoring checklist, for each server, on one dashboard – CPU Utilization, HDD Space, RAM and Java Heap Space

Persistent Systems' SupportSuite enables Appian Support Teams to become more efficient – by focusing on the infrastructure parameters that are relevant to Appian, and by automating the most common tasks that Appian support teams perform.

SupportSuite provides tools and dashboards that automate the Appian server monitoring best practices recommended by Appian, for all servers – Engine, Application, Search and Web Server

SupportSuite is a set of powerful tools for Appian Support teams – it automates monitoring and support for Appian instances

Detect Zombie Processes

See the list of zombie processes in the servers – and kill them from the dashboard!

Upload / Download Plug-Ins!

Upload and download Appian Plug-Ins from the environment with one click. As simple as that!

Review Backups

Information on kdb backup files – Filesize, date and time, and you can even download the kdb files right from the dashboard!
