PERSISTENT

AppInsights Live!

The Appian Solutions Team from Persistent Systems designed a resolution to a common request from clients. That request was, "How do I get information from the Appian Platform without having to spend days, weeks, or months of developer time to retrieve it?"

Now, we have AppInsights Live! That not only resolves the request to gather the information, but also displays it in a clean and modern user interface. As a result, any stakeholder is now able to get a clear overview of the Appian Platform and Environment Performance independently, rapidly, and with ease.

Platform Snapshot

At any given time, a stakeholder can gather a high level overview of the entire platform. Reviewing all applications, tasks, users, and performance.

Active Users by Global Location

View all the active users, based on their global location.

Data Visibility pulled instantly every 60sec

Instantaneous data pulled and then displayed every 60 seconds.

Map Tasks for Users by Correlated Groups

View tasks for groups quickly, by viewing a merged grouping of tasks based on users within that group.

AppInsights *Live!*

Performance Transparency

Unsure if there is an issue, or where the issue in performance is located? Now you can find out quickly.

Platform Usage Reporting

Instant reporting on data that provides transparency for stakeholders.
